Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Kondorosi A;

Cebolla A,

New plant protein, useful for regulating differentiation and proliferation of plant cells, especially for stimulation of somatic embryogenesis -WPI; 2000-089743/08. P-PSDB; AAY53985. Kondorosi E,

The present sequence encodes an alfalfa protein, designated ccc52Ms.

The protein contains repeated WD40 (Trp-Asp) motifs, and belongs to the far (fizzy-related) subfamily. The WD40 motifs are situated in the far (fizzy-related) subfamily. The WD40 motifs are situated in protein comprises 7 domains, and the last domain, domain 7, contains a potential liaison site for cyclins. The N-terminal region of the protein has a peptide sequence (DRFIPSR) which corresponds to a motif which is conserved in fir proteins. The protein intervenes in the regulation of cellular differentiation, and augments endoreplication. The polymuclocide sequence and its antisense sequences are used to regulate the differentiation and proliferation of plant cells and for stimulating somatic embryogenesis. They are also useful for promoting cendoploidy in plant cells or tissues to increase productivity of central in culture, by increasing the conversion of embryos. Disclosure; Page 21-23; 36pp; French.

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
which represent the human ORFX open reading frames 1 to 3161. The ORFX
sequences have activities such as: cytostatic; hepatotropic; vulnerary;
antipsoriatic; antiparkinsonian; nootropic; neuroprotective;
continuotsimilant; cardiant; thrombolytic; coaquilant; vasotropic;
immunostimilant; cardiant; thrombolytic; coaquilant; vasotropic;
antidabetic, hypotensive; dermatological; immunosuppressive;
contidabetic, hypotensive; dermatological; immunosuppressive;
antidabetic, hypotensive; dermatological; immunosuppressive;
contidabetic, hypothyroidism encological; immunodeficiency (SCID), AIDS, viral,
bacternal on hypothyroidism, cholesterol ester actorage, systemic;
continual haemoglobinuria, antidifiammatory disease; to enhance
nocturnal haemoglobinuria, antidifiammatory disease; to enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeuticis and pharmaceutical furge. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The invention relates to constructing (M1) a strain of diploid fungal cells in which both alleles of a gene are modified, comprising modifying cone allele by insertion or replacement by a cassette having an expressible selectable marker and modifying other allele by insertion; of a promoter replacement fragment with a heterologous recombination, of a promoter replacement fragment with a heterologous promoter. (M1) is useful for constructing a strain of diploid fungal cells in which both alleles modified are useful for identifying a gene that contributes to the aurivial or growth of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal and for identifying a therapeutic agent for treatment of a mammalian disease. (M1) is useful for identifying a compound which modulares the activity of a gene product, preferably enzymatic activity, carbon compound catabolism, biosynthetic, transporter, transcriptional compound catabolism, biosynthetic, transporter, transcriptional compound is useful for identifying a compound having the ability to inhibit growth or proliferation of C. albicans cells and for translational, signal transduction, DNA replication and cell aivision activity. The method is useful for identifying a compound having the custorist in infection by C. albicans. The present sequence is that of an essential candida albicans gene used in the method of the invention. Note: The sequence data for this pased on sequence information supplied to Derwent by the process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cccroadagaagccrcaacaararcaaagcrrccararagararcaararaaa 864

                                                                                                                                                                                                                                                                                                                                                                                                    ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chain reaction (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The colymucleotides are also used in diagnostics as expressed sequence tags colymucleotides are also used in diagnostics as expressed sequence tags colymucleotides normal activity of (II) or to treat disease states involving or constore normal activity of (II) or to treat disease states involving or (II). (II) is useful for generating antibodies against it, detecting or a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for generic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences AASA4197-AAS94564 represent novel human or appeared to this patent did not appear in the printed separation, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1019

essential gene; Aspergillus fumigatus; infection; biofilm; antibody; immune response; ds. The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus fumigatus. The isolated nucleic acids of the invention are used to treat or prevent infections by a pathogenic organism such as A. fumigatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contamination of an object by A. fumigatus, or to prevent or inhibit formation on a surface of a biofilm comprising A. fumigatus. The polymucleotides are useful for δ New purified or isolated nucleic acids of essential genes of Aspergillus fumigatus, useful for treating or preventing infections A. fumigatus, or for treating a non-infectious disease in a subject e.g. cancer SM; Lemieux Hu W,

expressing recombinant protein for characterisation, screening or therapeutic use, as markers for host tissues in which the pathogenic organisms invade or reside, for comparing with the DNA sequence of A. timigatus to identify duplicated genes or paralogues having the same or similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify protential orthologous essential or virulence genes for selecting and making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an artispen to raise anti-DNA antibodies or to elicit another immune response, and for identifying polyuncheotides encoding the other protein with which binding occurs or to identify inhibitors of the binding cours or to identify inhibitors of the binding clicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for host issues in which pathogenic organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence to reside actions. This polynucleotide sequence represents one of the essential constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1088

The isolated nucleic acids of the invention are used to treat or prevent infections by a pathogenic organism such as A. fumigatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contamination of an object by A. fumigatus, or to prevent or inhibit formation on a surface of a biofilm comprising A. fumigatus. The polynucleotides are useful for expressing recombinant protein for characterisation, screening or therappeutic use, as mankers for host tissues in which the pathogenic organisms invade or reside, for comparing with the DNA sequence of A. fumigatus to identify duplicated genes or paralogues having the same or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ά

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    16-APR-2003
```

```
sequences of other related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raleing anti-protein antibodies, as an antigen to raise anti-DNA antibodies or to elicit another immune response, and for identifying polymucleotides encoding the other protein with which binding occurs or to identify inhibitors of the binding interaction. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantizatively determine levels of the protein in biological fluids, as a marker for host rissues in which pathogenic organism invade or reside, and to host tissues in which pathogenic organism invade or reside, and to factoria. This polymucleotide sequence represents one of the essential genes of Appergillus fumigatus of the invention.
biochemical activity and/or function, for comparing with

AGATTATTGTTTGGAGATACCCCACTATGTCAAGCTGGCGATTCTTACGGGCGTACTT 1448	75 BP. sntial gene #3046.	ential gene; Aspergillus fumigatus; infection; ofilm; antibody; immune response; ds.	12. 7P. SP. SP. 3P.	mudio C, Eroshkin AM, Hu W, Lemieux SM;	nucleic acids of essential genes of seful for treating or preventing infections by ting a non-infectious disease in a subject; English.	novel purified or isolated nucleic acids of illus funigatus. The isolated nucleic acids of treat or prevent infections by a pathogenic atus, to treat a non-infectious disease in a prevent or contain contamination of an object event or inhibit formation on a surface of a ligatus. The polynucleotides are useful for oten for characterisation, screening or is for host tissues in which the pathogenic e, for comparing with the DNA sequence of A. Ilcated genes or paralogues having the same or ity and/or function, for comparing with DNA ity and/or function, for comparing with DNA elucation pathogenic or distant pathogenic organisams to identify ential or virulence genes, for selecting and chunct to a nucleic acid array for examination
ATAGGGTTCTCTATCTTGCCATCTCTCCA(tandard; DNA; 1875 BP. 3 (first entry) s fumigatus essential	ytostatic; essential camination; biofilm; fumigatus. -A2.	2002WO-US1314 2001US-285697 2001US-287066 2001US-295899 2001US-303899	LITRA PHARM INC. Tishkoff D, Zamudio C, -093124/08.	or isolated nucleic a fumigatus, useful for , or for treating a no Page -; 175pp; English	The invention relates to novel purified or isolate essential genes of Aspergillus funigatus. The ison carganism such as A. fumigatus, to treat a non-infect corganism such as A. fumigatus, to treat a non-infect (e.g. cancer), to prevent or contain conto by A. fumigatus, or to prevent or inhibit formatic expressing recombinant protein for characterisatic expressing recombinant protein for characterisatic corganisms invade or readde, for comparing with the corganisms invade or readde, for comparing with the fumigatus to identify duplicated genes or paralog similar biochemical activity and/or function, for sequences of other related or distant pathogenic complemitial orthologous essential or virulence gene making oligomers for attachment to a nucleic acid

of expression patterns, for raising anti-protein antibodies, as an antigen to raise anti-DNA antibodies or to elicit another immune response, and for identifying polymucleotides encoding the other protein with which binding occurs or to identify inhibitors of the binding interaction. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for isolate correlative receptors or ligands in the case or virulence factors. This polymucleotide sequence represents one of the essential genes of Aspergillus fumigatus of the invention.
